Your Power Testing Solution

IT9100 Power Meter

The IT9100 power meter can provide the maximum input of 1000 Vrms and 50 Arms and measurement bandwidth of 100 KHz, and can be easily used for measuring the voltage, current, power, frequency, harmonics and other parameters. The standard configuration includes USB, GPIB, RS232 and LAN communication interfaces and also interfaces for USB-based peripheral devices. Users can save the measured parameters into the external storage medium. The basic voltage and current accuracy is 0.1%. Moreover, the power meter has rich integrating functions, such as the active power. It is widely applied in test of motors, household appliances, UPS, etc.

Features

- 4.3-inch color LCD (TFT)
- Input range: 1000 Vrms / 50 Arms
- Harmonic components *1
- The accuracy of voltage and current measurement is up to 0.1%
- The voltage, current, power, harmonics and other parameters can be measured at the same time
- The power meter has a function of harmonic measurement, and can be used for measuring up to 50th harmonics
- The power meter has rich and powerful integrating functions, and can be used for measuring electric energy which is bought or sold
- The interfaces for USB-based peripheral devices are provided, and the user can *save data into the external storage medium
- Standard built-in USB, GPIB, RS232 and Ethernet communication interfaces

*1 Optional function for IT9121E

Self-define Interface display style

IT9100 series power meter provide a 4.3-inch color high-resolution TFT LCD for the user, and real-time values can be displayed with high brightness and remarkable colors even in a dark test environment. In addition, the IT9121 power meter provides multiple interface display styles (View1, View4 and View12). The user can customize the screen display parameter type and display sequence. The humane design meets engineers' measurement demands in different tests.

Rich Measurement Functions

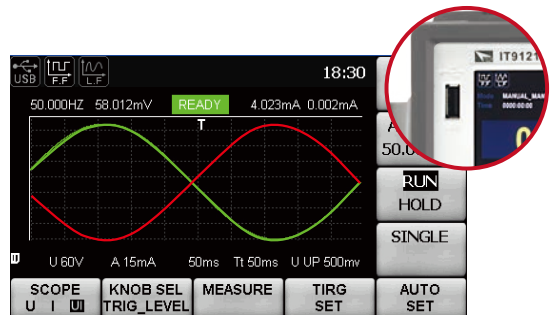

The IT9100 power meter can measure all AC and DC parameters, including the active power, reactive power, apparent power, power factor, voltage, current, frequency, phase difference, etc. It also has the function of integral measurement and up to 50th harmonic measurement. It is widely applied in tests of motors, household PCB, UPS, etc.

Oscilloscope function

IT9100 series power meter can display the waveform basing on sampling data. You can choose to display or hide the waveform of the input voltage and current.

Oscilloscope function of IT9100 series power meter allow users to directly observe the display fluctuations of voltage, current and power trends when testing household appliances performance, and can set the display trends, waveforms, values, histograms. Users can directly capture the waveform and record the value without external oscilloscope via external USB storage interface.

Integral Measurement Function

Due to the power integral function, the sold/bought electric energy in the interconnected power grids can be measured. IT9100 series power analyzer can provide the current integral and active power integral (Wh). Automatic range switching and accurate integral measurement can be carried out in the Buy and Sell mode, according to the input level.

Harmonic Measurement

The IT9121 power meter has a bandwidth of 100KHz, which can realize high-speed harmonic measurement within a wider dynamic range. In the harmonic mode, the voltage, the current, the active power, reactive power and phase of each harmonic and the factor of total harmonic distortion (THD) can be tested.

Line and frequency filtering

IT9100 filter out the useless frequency components in the signal, improve the purity of the waveform, so as to improve the test accuracy. The frequency filter refers to filter out the high frequency components of interfere, making the measured frequency parameters more accurate.

Built-in abundant interfaces

IT9100 series power meter built-in GPIB/RS232/USB/LAN interfaces without extra purchase, high selectivity, save cost, and provide USB-Host interface for users, which can be used to connect with U disk directly and save the data and waveform of user test interface.

IT9121 series power meter built-in GPIB/RS232/USB/LAN interfaces without extra purchase, high selectivity, save cost.

IT9100 power meter

Current sensor input

IT9100 power meter provide measurement range with voltage 0 ~ 1000V, current 0 ~ 50A. For current measurement above 50 A, voltage input current clamp or current sensor can be used. IT9100 allow users to select 50mV-2V (EX1) or 2.5V-10V (EXT2) range.

IT-E185 power meter fixture

IT-E185 power meter fixture is an optional accessory that ITECH provide, users can easily implement IT9100 series power meter wiring test.

- IT9100 series power meter provide optional accessories Test IT-E185(250V/15A), Easy to use

- Applications

Test the AC input power consumption of the AC-DC adapter, IT9100 is required to be series to the lines between adapter and civil use AC network. Users can wire simply without destroying the original plug by using IT-E185.

1. Connect input port of the DUT with a three-point socket of fixture point panel

2. No need to cut the plug, fixture can strip out the voltage terminals and current terminals from three-pin plug automatically, connect voltage and current terminals with corresponding voltage and current terminals of 9121 power meter.

IT9100 Power Meter Application

Energy Star applications

Minimum current range of IT9100 series power meter is 5mA, the measured display number is 5, IT9100 can more accurately measure the standby product's current value, as well as power value, meet the ENERGY STAR test requirements.

Household appliances power consumption testing applications

- ☑ 5mA range help to low current measurements
- ☑ Auto range function in integral mode
- ☑ IT9100 series power meter can measure power factor, harmonic, efficiency, power consumption, crest factor and other parameters.

Motor testing applications

- ☑ long time integral measurement
- ☑ Frequency bandwidth: DC, 0.5Hz to 100kHz
- ☑ IT9100 power integration function can measure the power grid to sell / buy electricity. IT9100 power meter provides current integration and active power integration (Wh). Can buy and sell electricity in the mode, according to the size of the input level, IT9100 can automatically switch range and accurately perform integral measurement according to the input level in the buy electricity and sell electricity mode.

Charging station industry application

In recent years, with the increasing subsidy efforts of the state on the new energy automotive industry, coupled with gradual improvement of supportive policies, the new energy automotive industry has made considerable progress. However, the construction of supporting facilities such as charging stations will also need to be resolved urgently. ITECH power meter provides a full range of test solutions for the overall equipment of charging station, designed to help users provide a strong basis for charging station design.

- Charging station efficiency measurement
- Charging station input harmonic measurement
- Charging station standby power consumption measurement

Photovoltaic wind power industry applications

The IT9100 series power meter can accurately measure the input, output voltage, current, power, and other electrical parameters of new energy inverters. And can provide accurate efficiency, harmonics and low voltage ride through testing and other functions.

Power industry applications

Switching power supply and UPS power supply are currently one of the most used powers. Switching power supply is widely used in almost all electronic devices with small size, light weight and high efficiency. And UPS is using the inverter principle, to provide stable, uninterrupted power supply to load. Because of the large number of uses, international standards give a clear indicator for switching power supply on the grid harmonic pollution. IT9100 switching power supply can provide a comprehensive parameter measurement for research and development and production stage of switching power supply.

Set the maximum number of THD calculations

- Just one power meter can complete the efficiency measurement
- Average active power measurement in integral mode
